

# CEMENT TESTING MACHINES

Complying with EN 196-1 and ASTM C109

ORIGINE  
FRANCE®  
GARANTIE

BVCert. 6019440

Our standard testing machine is equipped with 2 jacks: 1 for flexural tests (max load from 8 to 50 kN) and 1 for compressive tests (max load from 200 to 500 kN).  
**Option:** 3rd jack for low range compressive tests (see above picture).  
 Once again, great care has been given to ergonomics, with high pedestral, transparent doors, crumb collector and so on.

## SOFTWARE

Thanks to the touch screen, the operator can select the jack and launch each test of the batch. At the end, the average value is automatically calculated following the request of EN standard and all results are sent to a custom report.

Frames with one only jack are also available

Single compressive frame (200 to 500 kN)

Single flexural frame (10 o 40 kN)
